

Electro Industries introduces
the next generation of

PACKAGED MAKE-UP AIR

with unique multi-speed control*

APPLICATIONS

Electro Industries' Packaged Make-Up Air units are designed for today's tighter homes where unhealthy negative pressure can be created by appliances such as kitchen vent hoods, fireplaces, dryers, gas furnaces, water heaters, bathroom exhaust fans or any appliance without sealed combustion.

Electro's high efficiency, electric Make-Up Air units provide fresh air to prevent negative pressure in your home or building, reducing backdrafting combustion gasses that could create a health risk.

International Residential Code (IRC) requires exhaust hood systems in excess of 400 CFM to have make-up air approximately equal to the exhaust air and to automatically open and close with the operation of the fan.

STANDARD FEATURES

- WarmFlo® Digital Proportional Temperature Control - utilizes full element modulation with solid state relay, inlet and outlet temperature sensors, to maintain precise user defined temperature set point
- Integrated powered inlet damper
- Aluminum mesh permanent washable filter
- All models include (1) CT "doughnut"
- Simple installation, mounting kit included
- Listed for horizontal or vertical installation
- Can be easily wall-hung
- 20-year finned rod element warranty
- 2-year parts warranty
- Made in the USA

ELECTRO'S INDUSTRY EXCLUSIVE FEATURES OF 5-22 KW MODELS

*Electro's unique control adapts to multi-speed range hoods or multiple fan applications:

- **Multiple Fan Speed Output** - Low, Medium, and High fan speed output to match multi-speed range hoods.
- **Multiple Control Input Options** - Three current transformer (CT) inputs allow for multiple fan applications. CT inputs will also provide variable blower speeds to more closely match multi-speed exhaust fans. Activation can also be as simple as an end switch or contact closure.
- **LCD Display** - Interactive display used for multiple fan speed calibration and real time estimated CFM output. Also displays desired target temperature as well as incoming and supply air temperatures.

ELECTRO'S FEATURES OF 1-2 KW MODELS

- **Variable Fan Speed Output** - Easy to adjust fan speed knob allows for precise CFM output.
- **120VAC Power Connection** - Plug-in cord allows for simple power connection.
- **Control Input Options** - Activated through a basic end switch connection, thermostat, or current sensing relay.

SPECIFICATIONS (Reference Installation & Operating Instructions, EI906/EI907)

TEMPERATURE RISE - Selecting the best model for your application:

- 1 Choose your desired temperature rise (this is the difference between the coldest design day temperature and desired duct air temperature).
- 2 Move across the chart from your desired temperature rise to the CFM required (you may have to select a model with a higher CFM and adjust down to your required CFM at installation).

Example: In an application where your coldest day averages 0° F and you require 50° F duct air, choose 50° F temperature rise. If you require 400 CFM you would select the MA10.

Model →	SINGLE PHASE MODELS						3-PHASE MODELS	
	MA01	MA02	MA05	MA10	MA15	MA20	MA14	MA22
Required Temp Rise	CFM	CFM	CFM	CFM	CFM	CFM	CFM	CFM

INSTALLATION SPECIFICATIONS

This product is designed for zero clearance, but use the following mounting and spacing criteria:

1. Unit can be installed vertically or horizontally. When vertical, inlet must face down.
2. When using CT doughnut, use Class II low voltage wiring methods to connect CT to Make-Up Air unit.
3. Make mounting provisions for a 1" air space at the top.
4. The sides, any location, can be in direct contact with wood framing materials.
5. No materials shall be in contact with the cabinet housing which has a flame point less than wood, 300° F (150° C).
6. Product shall be installed in a conditioned space only.
7. Heating elements are locked out when entering air temperature is > 55° F (12.8° C).
